Chapter 2 -WIC Services and Offices

WIC = Women, Infants & Children Program
<http://www.northwic.org>
Main office: (215) 978-6100

<http://www.facebook.com/PhiladelphiaWICProgram>

<https://twitter.com/PhiladelphiaWIC>

Any mother interested in breastfeeding may be referred to a WIC office if she is pregnant or has children under 5 years old. WIC enrollment is based on the entire income in the household and the number of people in the family. Middle-income and poor families may be eligible.

WIC encourages breastfeeding women to breastfeed for at least one year, with the gradual introduction of iron-rich complementary foods start about 6 months and to continue for as long as mother and baby find the relationship mutually rewarding. Women who breastfeed exclusively are given a food package (for them and their baby) that is worth nearly \$2,000 in the 1st year.

Pennsylvania mandates that a new mom has only 2 options when she is certified into the program during her infant's first month:

- 1) Exclusive Breastfeeding
- 2) Non-breastfeeding. Her baby must be 1 month old to be certified as a Partially Breastfeeding mom.

Peer Counselors are available at various locations throughout the year to provide breastfeeding support.

To find your local WIC site and telephone number, go to www.northwic.org/locations.

Call ahead to check when the counselor is available.

Once the mother is enrolled in WIC, she may be referred to Lisa Volpe CLC at (215) 978 6100, x 22, for a breast pump.

Multi-user, hospital-grade pumps are available to a mother whose infant is in a Philadelphia hospital for a prolonged period. She must provide identification for herself and her baby and place a \$25 deposit, \$20 of which is refunded upon pump return.

Double-sided electric pumps are given to women who work and/or attend school if they are active in the WIC program and are not receiving any formula. The mother must provide identification for herself, proof of her baby's birth, and a note from her employer or school counselor.

Coordinator and Manager of the WIC breastfeeding program: Denise Sobolewski CLC
dsobolewski@northwic.org

Electric breast pump rental available by calling Lisa Volpe: cell phone (215) 913-9199
(This service is for infants hospitalized in a Philadelphia hospital whose mothers are committed to breastfeeding.)

WIC of Pennsylvania

Since a statewide breastfeeding coordinator has not yet been named, please direct inquiries to:

Shirley H. Sword, MS, RD, LDN
Bureau of Women, Infants & Children (WIC)
Pennsylvania Department of Health
625 Forster Street
Health & Welfare Building, 7th Floor West
Harrisburg, PA 17120-0701
Phone: 717.783.1289
ssword@pa.gov

If a mother receives a pump of lesser quality than prescribed: If a woman is having an issue with a pump that was prescribed, she can review her notice of decision and file an appeal and/or call the member services representative at her Medical Assistance Managed Care Organization to discuss with them.

Every WIC participant over the age of 1 receives a one-time \$20.00 to use during the season (June 1-Nov 30) at participating Farmer's Markets throughout the city.

Chapter 4 -Hospital and Birth Center Programs

Hospital-based lactation professionals assist mothers and babies when they are in the hospital. Some are available by phone or provide consultation at the hospital after hospital discharge. Hospital-based lactation professionals provide free service and counseling only for patients delivering at that hospital. Directors of programs or primary lactation consultants are listed.

These Philadelphia hospitals are Baby-Friendly designated: Einstein Medical Center, Thomas Jefferson University Hospital, Pennsylvania Hospital, Hospital of the University of Pennsylvania, and Temple University Hospital.

Children's Hospital of Philadelphia is designated a Keystone-10 facility, as are all BFHI hospitals

Philadelphia County

(215) 456-6936
Jane Dougherty RN, IBCLC
2 permanent staff
Outpatient Drop-in Clinic

Sue Bechhold, IBCLC
Lankenau Medical Center
100 East Lancaster Avenue
Wynnewood, PA 19096

Chapter 5 - Community Lactation Consultant/Counselor Services (Free, sliding scale or fee for service)

IBCLC home visits (call the Case Manager to be certain):

- AETNA and Independence Blue Cross (Personal Choice, Keystone Health Plan East) have IBCLCs in their networks.
- United Healthcare may offer a GAP exception: as they have no in-network providers, they may grant a covered mother an exception to see an IBCLC.

Find a Certified Lactation Counselor, Advanced Lactation Consultant or Advanced Nurse Lactation Consultant: <http://www.talpp.org>

Find a local International Board Certified Lactation Consultant: www.pro-lc.org

Breastfeeding Resource Center has 2 offices; Abington, PA (215) 886-243
King of Prussia, PA (484) 582-6682
A sliding scale is offered. www.breastfeedingresourcecenter.org

Northeast MOMobile Classic (free home-based or telephone breastfeeding education and support)

Maternity Care Coalition

Michelle Sutton, CLC

MSutton@maternitycarecoalition.org

841 E. Hunting Park Ave, 2nd Floor

Philadelphia, PA 19124

(215) 850-6631

maternitycarecoalition.org

This is most appropriate for families with Medicaid insurance or with no insurance.

Healthy Start/ Division of Maternal, Child, and Family Health/ Philadelphia Department of Public Health (free Health Center or Home support)

Ta'Hirah Williams CLC

Ta'hirah.williams@phila.gov Call or text: (267) 506-4118

Galissa Jones, CLC

Galissa.Jones@phila.gov Call or text: (267) 474-3752

Lifecycle WomanCare and The Birth Center

Lactation consultations every THURSDAY in our South Philly satellite office (1214 Moore St).

Appoints available Monday through Friday at our Bryn Mawr location.

All services are OPEN TO THE PUBLIC.

We accept MOST MAJOR INSURANCE PLANS (copays may apply depending on plan).

Call for more information 610-525-6086.

Chapter 9 - Breastfeeding Classes

Classes are open to anyone, no matter where the baby will be born. Fees vary depending on the institution and the client's insurance carrier. The Basic Breastfeeding class is for prenatal women; the Working Mother classes are for prenatal or postpartum women. Support people are welcome.

Philadelphia County

Department of Obstetrics and Gynecology
Einstein Medical Center Philadelphia
5501 Old York Road
Philadelphia, PA 19141
(215) 456-8305

Prenatal childbirth class offered: a one day class on a weekend day. Breastfeeding incorporated into this class. Private insurance pay \$95. Other insurances billed directly.
Centering Pregnancy classes offered include breastfeeding.

Registrar: Jacqueline Neff
Hahnemann University Hospital
Broad and Vine Streets
Philadelphia, PA 19102
(215) 762-4381

Prenatal breastfeeding classes offered 6 Thursdays a year (6 pm to 8 pm) and the 2nd Saturday of the month (10am to noon)
Call for times and dates.
Free for those delivering at Hahnemann; \$20 check or money order per couple if delivering elsewhere.

Sue Stabene
Hospital of the University of Pennsylvania
3400 Spruce Street
Philadelphia, PA 19104
(215) 662-3243
1-800-789-PENN
Six week preparing for childbirth course includes breastfeeding education.

Chapter 10 - Pumps and Breastfeeding Equipment

Breast pumps come in a range of styles and prices. Selection of a pump depends on its purpose. Multiple-user electric breast pumps used in hospitals or as rental pumps are recommended for long-term, heavy use, such as a mother pumping for a premature infant 8 to 12 times a day or anyone who is exclusively pumping. Double pump kits reduce time spent pumping as both breasts can be pumped at once.

Some insurance companies reimburse for electric breast pump rental when a breastfeeding baby is hospitalized, and require a prescription from the baby's doctor stating the need for the baby to have his or her mother's breast milk. If the mother of a hospitalized baby is WIC eligible, see **Chapter 2, about WIC**, about renting a multiple-user pump.

When a mother and baby are separated for several feedings each day (as with work or school attendance), a multi-user electric rental, a single-user electric breast pump or a manual pump will all work.

When a baby is in NICU or the mother is exclusively pumping, a multi-user (hospital grade) pump is best.

Some rental stations sell pumps, related breastfeeding products and nursing brassieres. Each of the companies listed has a variety of single-user pumps: manual, battery, or small electric pumps that may be purchased, as well as multi-user pumps that can be rented. (Hygeia Baby and Limerick sell multi-user pumps.)

Contact the sites below to find a local durable medical equipment (DME) company that accepts the insurance, or retail provider near to the mother. Or, see **Chapter 12**, about DME companies.

(N.B. Lactation professionals are reporting that some insurance pumps can be of lesser quality than retail pumps, despite being made by the same manufacturer. If a mother reports a diminishing supply, check the suction levels and cycling pattern. Check to see that parts are fitted correctly and tightly, and that any flap or valve is whole and not torn.)

(215) 829-5046	Solutions for Women, Philadelphia, PA

Mothers with newly discharged late pre-term or premature babies may need to rent an electric breast pump and express milk in addition to breastfeeding, because these babies may be too weak or too young to transfer enough milk to maintain a mother's production. Using a scale that is accurate to 2 grams allows the mother to weigh the baby before and after breastfeeding, to see how much milk the baby drank. She can then feed the baby additional milk that she has expressed, so the baby has enough intake. The additional milk can be fed to the baby by NG tube, cup, spoon, dropper, finger feeding, or bottle. A rule of thumb is that babies should be taking in ounces equal to 2.5 times their weight in pounds each 24 hours.

Parents need to be told how much milk the baby needs in 24 hours, so they can assure an adequate intake. The baby needs to be fed at least eight times in 24 hours. Holding the baby skin-to-skin will help the mother's milk supply, remind the baby to wake up, and will help the baby learn to breastfeed. Close follow-up, at least once weekly visits, by the pediatric care provider is essential for the near-term and premature baby after hospital discharge. Lactation support is also essential until the situation is resolved.

Chapter 13 - Common Questions about Clinical Situations

(birth control, contraindications, postpone breastfeeding, handling human milk, traveling with human milk, special situations)

Birth Control and Breastfeeding:

Natural family planning and barrier or drugstore methods are compatible with lactation.

Note that the following methods of contraception do not prevent Sexually Transmitted Diseases (STDs), therefore, condoms should be used in conjunction to decrease the chance of STDs.

"Until better evidence exists, it is prudent to advise women that hormonal contraceptive methods may decrease milk supply especially in the early postpartum period. Hormonal methods should be discouraged in some circumstances (III):

1. existing low milk supply or history of lactation failure
2. history of breast surgery
3. multiple birth (twins, triplets)
4. preterm birth
5. compromised health of mother and/or baby"

http://www.bfmed.org/Media/Files/Protocols/Contraception_During_Breastfeeding.pdf

Lactational Amenorrhea Method (LAM): When a baby is 6 months old or less, is totally breastfeeding (i.e. not getting anything else to eat), has all sucking needs met at the breast (i.e. no pacifier), is waking to breastfeed during the night, and the mother has not had a period, breastfeeding affords 98-99% protection from pregnancy.

www.arhp.org/Publications-and-Resources/Patient-Resources/Fact-Sheets/Breastfeeding

Reporting a medication's negative impact on milk supply, infant health or breastfeeding:
<https://www.accessdata.fda.gov/scripts/medwatch/index.cfm?action=reporting.home>

Breastfeeding modifications and restrictions (both permanent and temporary)

<https://www.cdc.gov/breastfeeding/breastfeeding-special-circumstances/contraindications-to-breastfeeding.html> (accessed 2/9/19)

NO breastfeeding or feeding expressed milk to infant:

Infant is diagnosed with classic galactosemia, a rare genetic metabolic disorder¹

Mother is infected with the human immunodeficiency virus (HIV)¹ (Note: recommendations about breastfeeding and HIV may be different in other countries)

Mother is infected with human T-cell lymphotropic virus type I or type II [PDF-805KB] (HTLV – 1/2)¹

Mother is using an illicit street drug, such as PCP (phencyclidine) or cocaine¹ (Exception: Narcotic-dependent mothers who are enrolled in a supervised methadone program and have a negative screening for HIV infection and other illicit drugs can breastfeed)

Mother has suspected or confirmed Ebola virus disease

TEMPORARY Cessation of breastfeeding; NO expressed milk to infant:

Mother is infected with untreated brucellosis

Mother is taking certain medications (always check with Lactmed first)

The mother is undergoing diagnostic imaging with radiopharmaceuticals

Mother has an active herpes simplex virus (HSV) infection with lesions present on the breast (Note: Mothers can breastfeed directly from the unaffected breast if lesions on the affected breast are covered completely to avoid transmission)

TEMPORARY Cessation of breastfeeding; YES expressed milk to infant:

Mother has untreated, active tuberculosis

(Note: The mother may resume breastfeeding once she has been treated appropriately for 2 weeks and is documented to be no longer contagious)

“Breastfeeding should not be discouraged for women being treated with the first-line antituberculosis drugs because the concentrations of these drugs in breast milk are too small to produce toxicity in the nursing newborn. For the same reason, drugs in breast milk are not an effective treatment for TB disease or LTBI in a nursing infant.”

Active untreated tuberculosis

P. 116 (AAP Red Book, 21st edition 2018) “Women with tuberculosis who have been treated appropriately for 2 or more weeks and who are not considered contagious (negative sputum) may breastfeed.” “Breastmilk can be expressed and given to the infant during the short separation.”

Mother has active varicella (chicken pox) infection that developed within the 5 days prior to delivery to the 2 days following delivery

Breastfeeding Interrupted or Postponed:

EXPRESSED MILK CAN BE GIVEN:

Active herpetic lesions on breast:

Cindy Pride, MSN, CPNP, TTUHSC Infant Risk Center <http://www.infantrisk.com>

“If the lesions are on only one breast, mother may continue breastfeeding on the unaffected breast while pumping and discarding on the affected breast. She should keep the affected breast covered and use meticulous hand washing with each breastfeeding session to decrease risk to the infant. If the lesions are on both breasts, she should pump and discard and give an alternative form of nutrition until the lesions are scabbed over (no longer infective). If the lesions are not on the breast, then the mother may breastfeed from both breasts while keeping the affected body area covered.”

<https://www.cdc.gov/tb/topic/populations/pregnancy/default.htm> “Breastfeeding should not be discouraged for women being treated with the first-line anti-tuberculosis drugs because the concentrations of these drugs in breast milk are too small to produce toxicity in the nursing newborn. For the same reason, drugs in breast milk are not an effective treatment for TB disease or LTBI in a nursing infant. Breastfeeding women taking INH should also take pyridoxine (vitamin B6) supplementation.”

Brucellosis: p.415 “Temporary interruption of breastfeeding...pumping and discarding the milkfor the first 48-96 hours of therapy in the mother.”

Gonorrhea:p.416

“Mother should be separated from infant until completion of 24 hours of therapy. Pump and discard for 24 hours.”

Influenza:<https://www.cdc.gov/flu/professionals/infectioncontrol/peri-post-settings.htm>

“CDC recommends that facilities consider temporarily separating the mother who is ill with suspected or confirmed influenza from her baby following delivery during the hospital stay. Throughout the course of temporary separation, all feedings should be provided by a healthy caregiver if possible. Mothers who intend to breastfeed should be encouraged to express their milk.”

MRSA: p. 419 "Management... should be based on severity of disease and whether the infant is premature, LBW, VLBW, previously ill or full term." "Breastfeeding on the affected side in cases of mastitis generally is recommended." P. 116 (AAP Red Book, 31st edition, 2018).

Syphilis: p.789 "Breastfeeding acceptable after 24 hours of effective therapy; discard breastmilk for 24 hours."

Page Sources: RA Lawrence, RM Lawrence: Breastfeeding: A Guide for the Medical Profession (8th Edition). Philadelphia: Elsevier Mosby, 2016

Varicella: Cindy Pride, MSN, CPNP, TTUHSC Infant Risk Center <http://www.infantrisk.com>

"If the lesions are on only one breast, mother may continue breastfeeding on the unaffected breast while pumping and discarding on the affected breast. She should keep the affected breast covered and use meticulous handwashing with each breastfeeding session to decrease risk to the infant. If the lesions are on both breasts, she should pump and discard and give an alternative form of nutrition until the lesions are scabbed over (no longer infective). If the lesions are not on the breast, then the mother may breastfeed from both breasts while keeping the affected body area covered."

Partial Breastfeeding may be possible:

Duarte's galactosemia

Phenylketonuria

J Pediatr Nurs. 2012 Aug; 27(4): 319-327

Breastfeed Med. 2014 Apr 1; 9(3): 142-148.

Breastfeeding and infant growth should be regularly monitored after hospital discharge for:

Breastfeeding is a confidence game; whatever the situation, tell the mother to keep the baby close and nurse responsively (8-15 times/ 24 hours) in the first weeks, and bring the baby for weekly weight checks until it is certain that breastfeeding is going well and the baby is gaining appropriately.

Women in the following situations **sometimes** do not produce a full milk supply; therefore, their babies need to be followed with weekly weight checks until the baby demonstrates consistent weight gain:

- Women who have used infertility technology to become pregnant
- Women who do not experience breast changes during pregnancy or during the first postpartum week
- Women who have had breast surgery.
- Women who have asymmetrical breasts
- Women who have hypertension
- Women who are using hormonal birth control.
- Women using a nipple shield (pump 3-4 times/24 hours during first 2 weeks postpartum)

Babies in the following situations **sometimes** have difficult transferring sufficient milk and need weekly follow-up until consistent weight gain is demonstrated:

- Discharged from an intensive care unit
- With special healthcare needs
- With tethered oral tissue (cheek, lip or tongue tie)

Contaminants in Human Milk:

<https://www.cdc.gov/breastfeeding/breastfeeding-special-circumstances/environmental-exposures/index.html>

"Breastfeeding is still recommended despite the presence of chemical toxins. The toxicity of chemicals may be most dangerous during the prenatal period and the initiation of breastfeeding. However, for the vast majority of women the benefits of breastfeeding appear to far outweigh the risks. To date, effects on the nursing infant have been seen only where the mother herself was clinically ill from a toxic exposure."

See: www.ilca.org/files/resources/ilca_publications/EnvironContPP.pdf
www.nrdc.org/breastmilk/default.asp
www.cdc.gov/niosh/topics/ABLES/pdfs/CSTE_2007_Fagan.pdf
www.ncbi.nlm.nih.gov/pmc/articles/PMC2569122/
<https://drive.google.com/file/d/0B6pzivBZDmsXdzq1UHRxaE9hWUE/view?pref=2&pli>

"Lead in breast milk is much lower than in blood; thus, the benefits of breastfeeding generally outweigh the risks."

"Exposure to lead in utero may be the most devastating to a child's development. Recommend BLL < 5 mcg/dl for pregnant women and women considering pregnancy."

Handling Human Milk:

"Expressed human milk does not require special handling (such as universal precautions), as is required for other bodily fluids such as blood. It can be stored in a workplace refrigerator where other workers store food, although it should be labeled with name and date. "

ABM Clinical Protocol #8: Human Milk Storage Information for Home Use for Full-Term Infants
BREASTFEEDING MEDICINE Volume 12, Number 7, 2017

Immunizations and Breastfeeding 2019:

"DO NOT Administer smallpox and yellow fever vaccines to nursing mothers.

<https://www.cdc.gov/breastfeeding/breastfeeding-special-circumstances/vaccinations-medications-drugs/vaccinations.html>

www.cdc.gov/breastfeeding/recommendations/vaccinations.htm

Jaundice and Breastfeeding:

Primary Prevention: "Frequent breastfeeding (8–12 times or more in 24 hours) is crucial both to increase infant enteral intake and to maximize breast emptying, which is essential for the establishment of milk supply. Feeding anything before the onset of breastfeeding delays the establishment of good breastfeeding practices and may hinder milk production, increasing the risk of reduced enteral intake and exaggerated hyperbilirubinemia. There is a positive association between the number of breastfeeds a day and lower TSB (total serum bilirubin)."

"When discussing any treatment options with parents, healthcare providers should emphasize that all treatments are compatible with continuation of breastfeeding.

"Do not supplement infants with anything other than mother's own expressed milk in the absence of a specific clinical indication." .

"First and best supplement is expressed own mother's milk. It can be hand expressed into a small cup or spoon and directly fed to the infant."

"If own mother's milk is not available, supplementing with donor human milk will increase enteral intake."

"It may be necessary to supplement with infant formula if neither own mothers' milk nor donor human milk is available. The impact of introducing formula to an exclusively breastfed infant must be considered"

"Supplementation of breastfeeding should preferably be undertaken using a cup, spoon, syringe, or supplemental nursing system (if infant is latching) simultaneously with or immediately following each breastfeed. Nipples/teats and bottles should be avoided where possible. However, there is no evidence that any of these methods are unsafe or that one is necessarily better than the other."

ABM Clinical Protocol #22: Guidelines for Management of Jaundice in the Breastfeeding Infant 35 Weeks or More of Gestation—Revised 2017

<https://abm.memberclicks.net/assets/DOCUMENTS/PROTOCOLS/22-jaundice-protocol-english.pdf>

Surgery and Breastfeeding:

ABM Clinical Protocol #15: Analgesia and Anesthesia for the Breastfeeding Mother, Revised 2017

Mothers with healthy term or older infants can generally resume breastfeeding as soon as they are awake, stable, and alert. (IV) Resumption of normal mentation is a hallmark that medications have redistributed from the plasma compartment (and thus generally the milk compartment) and entered adipose and muscle tissue where they are slowly released.

Brief procedures

“Mothers who have undergone dental extractions or other short procedures requiring the use of single doses of medication for sedation and analgesia can breastfeed as soon as they are awake and stable. Although shorter-acting agents such as fentanyl and midazolam may be preferred, single doses of meperidine/pethidine or diazepam are unlikely to affect the breastfeeding infant.^{1,5} (III) Local anesthetics given by injection or topical application are considered safe for breastfeeding mothers.^{2,3} (IV)”

Perioperative considerations

Breastfeeding mothers undergoing anesthesia or sedation should be scheduled as the first case of the day when possible to allow for minimal fasting times.

Encourage breastfeeding (or breastmilk feeding) when:

A baby has a cleft lip or palate or any congenital anomaly or disorder
A baby is jaundiced
A baby has diarrhea or otherwise ill
A baby is two, three, four years old or older
A mother is nursing 1, 2 or 3 other children
A woman is pregnant
A woman has twins, triplets, or quadruplets (as many as seven!)
A woman is a teenager or post-menopausal
A woman needs a mammogram
A woman has had breast surgery
A woman is adopting a baby (even if she has never been pregnant)
A woman has a breast infection
A woman has had cancer and is recovered
A woman has had an organ transplant
A woman has had gastric bypass surgery (she needs to keep taking her post-bypass vitamin supplements, particularly B-12, as prenatal vitamins may not be enough).

A mother has C. Difficile, hepatitis (A, B and C), toxoplasmosis, west Nile virus, or zika. (CDC 2017) Check sources for most current information.

Traveling with Human Milk:

<https://www.tsa.gov/travel/special-procedures/traveling-children>

“TSA officers may need to test liquids for explosives or concealed prohibited items. Officers may ask you to open the container and/or have you transfer a small quantity of the liquid to a separate empty container or dispose of a small quantity, if feasible.”

Inform the TSA officer if you do not want the formula, breast milk and/or juice to be X-rayed or opened. Additional steps will be taken to clear the liquid and you or the traveling guardian will undergo additional screening procedures, to include a pat-down and screening of other carry-on property.”

“Formula, breast milk, juice in quantities greater than 3.4 ounces or 100 milliliters are allowed in carry-on baggage and do not need to fit within a quart-sized bag. Remove these items from your carry-on bag to

be screened separately from the rest of your belongings. You do not need to travel with your child to bring breast milk.”

Traveling with a Breast Pump:

<https://www.tsa.gov/travel/security-screening/whatcanibring/items/breast-pump>

Carry On Bags: Yes

Checked Bags: Yes

Nursing Stations at Philadelphia International Airport

Chapter 14 - APPS for breastfeeding and pumping

Baby Connect (\$4.99) Tracks everything related to baby: diapers, feeding, growth, meds, sleep, and vaccines; caregivers can log in too; everybody can be synched together

Baby Feeding Log (free) – allows new parents to record all the basics for nursing, diapers, and sleeping

Baby Nursing (free) - for breast, bottle, and formula feeding mothers

Breastfeeding Central (\$3.99) created by an IBCLC

Breastfeeding Management (free) – complete informational resource for breastfeeding moms developed by Massachusetts Breastfeeding Coalition

iBabyLog (free) – tracks sleeping, breastfeeding, diaper changes, mood, baths

Feed Baby – Baby Tracker: (free) tracks everything about baby

Glow Baby (free) – has educational sections and networking

Latch Me (free) This app is full of resources for a breastfeeding mom to find local support. It includes help finding locations to breastfeed, doctors and lactation consultants nearby and more. You can also add nursing or pumping locations to the app as you find them.

Mamava App Download to find places to nurse, and the code for unlocking pods

Milk Maid (\$2.99) rated the best by a site for those exclusively pumping:
<https://exclusivepumping.com/breast-pumping-apps-which-is-the-best/>

Nancy Morbacher Breastfeeding Solutions (\$4.99). An interactive app developed by an IBCLC that guides a mother through 30 common situations. Has articles section too.

NICU Baby APP

<https://www.marchofdimes.org/nicufamilysupport/my-nicu-baby-app.aspx>

Nursing Room Locator Moms Pump Here (free) Find quiet and private nursing rooms, lactation lounges, and breastfeeding friendly places to breastfeed their baby or express breast milk. You can add locations.

Pump Log (free for first 50 uses, then \$6.99)

Pumpspotting <https://www.pumpspotting.com/> “it’s facebook meets yelp. meets boob.”

App for prenatal education: <http://www.coffective.com/learn/>

<https://itunes.apple.com/us/app/coffective/id849901936>

The Milk Man app (free) Just for dads. <http://pifistudy.net.au/milkman>
The Milk Man smartphone app is designed specifically for men about breastfeeding and early parenting.

Total Baby (\$4.99) Log anything, caregivers can log in too, everything can be synched together.

For mothers away from home looking for a Mamava pod:

<https://www.mamava.com/mobile-app/>

Chapter 15 - Selected Websites for Breastfeeding & Related Resources

The Internet is a continually expanding universe. Type the relevant phrase into a search engine. There are more sites about any topic than are listed here.

Chapter 16 - Sources of Donor Human Milk for Preterm and Sick Infants

Human Milk Bank Association of North America www.hmbana.org

(This professional association sets standards and guidelines for donor milk banks.)

2 Pennsylvania Milk Banks:

1) CHOP Mothers' Milk Bank Only for babies at CHOP.

2) Mid-Atlantic Mother's Milk Bank

3127 Penn Ave., Pittsburgh, PA 15201

(412) 281-4400

<https://midatlanticmilkbank.org/>

Offer 6 kinds of milk: colostrum, low dairy, defatted, cream, term, and preterm. Bridge milk program

Reimbursement for donor human milk:

"Insurance may pay for outpatient donor milk when there is a documented medical need.

Coverage for donor milk is evolving in our region, and we are seeing more cases being covered.

In August of 2017, the Pennsylvania Department of Human Services added Medicaid coverage for

medically indicated donor milk. Donor milk may also be purchased using employee Health

Flexible Spending Accounts. Parents need to contact their employer for more information."

<https://midatlanticmilkbank.org/order/>

PROLACTA Bioscience

<http://www.prolacta.com>

A source of human milk products (human milk fortifier, milks of different caloric content, and trophic feeds) for babies in the NICU:

To Donate Milk:

- (1) Contact Ohio Health Mothers' Milk Bank
- (2) Contact <http://www.mothersmilk.coop/>
- (3) Mothers' Milk Bank Northeast has a Breast Milk Depot at 3331 Street Road, Bensalem, PA. Contact: Kristen Quinn (267) 972-8008 or kquinn@acelleron.com
- (4) [Breastfeeding Resource Center locations in Abington and Wayne are collecting depots for the Mid-Atlantic Milk Bank](#)

For healthcare professionals and parents

Mommymeds.com

Information for parents about medications, procedures, and surgery and breastfeeding.
<http://mommymeds.com/>
Has an app.

Use of Contrast Media in Lactation

<http://www.radiology.ucsf.edu/patient-care/patient-safety/ct-mri-pregnancy/lactation>

"Lactating women who receive iodinated contrast or gadolinium can continue breast feeding without interruption."

American College of Radiology 2016 Manual
<https://www.acr.org/Quality-Safety/Resources/Contrast-Manual> (pp. 101- 102 specific to breastfeeding)

"Because of the very small percentage of iodinated contrast medium that is excreted into the breast milk and absorbed by the infant's gut, we believe that the available data suggest that it is safe for the mother and infant to continue breast-feeding after receiving such an agent."

"Because of the very small percentage of gadolinium-based contrast medium that is excreted into the breast milk and absorbed by the infant's gut, we believe that the available data suggest that it is safe for the mother and infant to continue breast-feeding after receiving such an agent."

Reporting a medication's negative impact on milk supply, infant health or breastfeeding:

(Parents and professionals can file a report.)

<https://www.accessdata.fda.gov/scripts/medwatch/index.cfm?action=reporting.home>
